Fresh Rock Intersects Highlights

- DDMan-20-79** - one of the highest gram x meter to date at Southern Mankouke - shows the persistent high-grade nature of the deposit.
 - It should be noted that this hole is within the current drill area and at a different azimuth.
- DDMan-20-77** - intersected the fresh rock over a larger interval of 17m with very high-grade gold of 3.99gpt.
 - This hole identifies the potential of the deposit in fresh rock and we will continue to drill to clearly understand the extents
