### MANAGEMENT'S DISCUSSION AND ANALYSIS

TSX-V:ROS

## ROSCANGOLD

(For the nine months ended July 31, 2024)

September 30, 2024

### **INTRODUCTION**

This management's discussion and analysis ("MD&A") has been prepared by Roscan Gold Corporation's ("Roscan" or the "Company") management and provides a review of the Company's operating and financial performance for the three and nine-month period ended July 31, 2024, as well as a view of future prospects. The MD&A should be read in conjunction with Roscan's: unaudited condensed interim consolidated financial statements for the three and nine-month period ended July 31, 2024; and, audited consolidated financial statements for the year ended October 31, 2023. Additional information related to the Company is filed electronically on the System for Electronic Document Analysis and Retrieval (SEDAR) and is available online at <a href="https://www.sedar.com">www.sedar.com</a>.

This MD&A may contain forward-looking statements, which may be influenced by factors described in the "Cautionary Statements" section of the MD&A. The "Risks and Uncertainties" section of this MD&A further describes other factors that could cause results or events to differ from expectations.

### Basis of presentation

Roscan's consolidated financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"). All amounts are expressed in Canadian dollars, unless otherwise noted.

NOTE: in this MD&A references to years, such as F2024 or F2023, refer to the fiscal year ending October 31.

### **Qualified Person Statement**

The scientific and technical information disclosed in this MD&A below has been reviewed and approved by Gregory Isenor, P.Geo., a director of the Company and a Qualified Person under National Instrument 43-101 ("NI-43-101").

Scientific and technical information contained in this MD&A has been referenced from the Company's NI 43-101 technical report titled, "Technical Report on the Kandiole Project, Mali" with an effective date of March 31, 2022.

### **CORPORATE PROFILE**

Roscan Gold Corporation ("Roscan" or the Company) is a mineral exploration company focused on exploring and developing its 402 sq. km Kandiole Project (the "Kandiole Project") situated in the in the prolific gold prospective Birimian rocks of western Mali, West Africa. The Kandiole Project is comprised of nine contiguous permits, six of which are 100% held by the Company. Roscan has also exercised its option to acquire a 100% interest in two permits and has the right to acquire a 100% interest in one other privately held permit pursuant to an option agreement.

Roscan is listed as a Tier 2 mining issuer on the TSX Venture Exchange ("TSX-V") and its common shares trade under the symbol ROS. The Company's common shares also trade on the Frankfurt Stock Exchange under the symbol 2OJ and on the United States OTCQB Venture Market under the "RCGCF".

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### **HIGHLIGHTS**

### **Kandiole Project - Exploration activities**

During the nine-month period ended July 31, 2024, the Company compiled the entire database to design the next exploration program including regional prospecting and drilling programs on its nine (9) permits currently held through its wholly owned subsidiaries, Roscan Mali and Komet Mali.

On December 20, 2022, the Company commenced a drilling program, which focused on the Dabia South (Kabaya), Mankouke South and Mankouke West, Bantanko East, Segondo West targets and Niala. The results of this well-defined drill program, which was to prospect gold occurrences outside the resource zones and some step-out holes at Kabaya to extend the resource area. This program ended in the third quarter of 2023.

The Mine ministry decree 2022-5157 MMEE-SG of 14 Nov 2022 authorizes the fusion of the Kandiole North and Mankouke Research permits to become Kandiole North permit alone. The consolidation between the new Kandiole North and the Dabia South permits in ongoing.

In February 2023, Roscan initiated the scoping study based on resources estimated and an environmental impact study to apply for an exploitation permit. The environmental and social permit was granted on March 6, 2023.

In August 2023, Mali's interim government adopted a new mining code and as part of their review of the mining sector, suspended the issuance and renewals of permits and exploration licenses. Now the new 2023 mining code has become functional with the approval of the Implementation Decree by the Council of Ministers and the President. Subsequently the Company have witnessed a number of agreements being publicly announced by the government and some mining companies, suggesting a path forward for a win-win situation with all stakeholders. The Company remains optimistic that negotiations would ultimately lead to an agreement to expedite the issuance of the mining permit in near term.

### **Kandiole Project - Permits**

In November 2022, the Kandiole North (40 sq. km) and the Mankouke permit (17 sq. km) were merged into one permit with Kandiole North becoming the surviving permit. There was no change in the total area.

The Moussala North permit expired on April 6, 2023, and the renewal of permit is pending due to the recent implementation of a moratorium as Mali is in the process of introducing a new mining code.

In February 2023, Roscan exercised its option to acquire the 42 sq. km Segondo West permit from SO.FI.SI Mining SARLU. The permit expired on March 20, 2023. The transfer and renewal of permit is pending for the same reason stated above.

### **Financing activities**

On March 11, 2024, the Company has closed a non-brokered private placement through the issuance of an aggregate of \$1,000,000 principal amount secured subordinate promissory notes for gross proceeds of \$1,000,000 (the "Offering"). The Offering constituted a related party transaction within the meaning of TSX Venture Exchange Policy 5.9 and Multilateral Instrument 61-101 — Protection of Minority Security Holders in Special Transactions ("MI 61-101") as insiders of the Company subscribed an aggregate of \$400,000 principal amount of Notes pursuant to the Offering. Gross proceeds of the Offering will be used for general corporate and working capital purposes.

On May 3, 2024, the Company announced that it has agreed to settle an aggregate of US\$1,050,000 owing to a certain creditor and related to drilling and other services provided to the Company to be settled as follows: I) initial cash payment of CAD\$50,000; 2) issuance of 5,000,000 common shares of the Company at a deemed price of CAD\$0.08 per common share; and 3) the issuance of a US\$677,000 principal amount interest bearing secured promissory note.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

In the third quarter of F2024, the Company received cash loans of \$170,000 from a director and a company controlled by a Company director/officer. These loans are non-interest bearing, unsecured and due on demand. These loans were made to enable the Company fund part of its financial obligations for the Kandiole Project.

On September 6, 2024, the Company announced that, further to its press release of March 11, 2024, it has extended the maturity date of its outstanding secured subordinate promissory notes in the aggregate of \$1,000,000. The Company has extended the maturity date from September 11, 2024, to September 11, 2025. All other terms and conditions of the Notes shall remain unchanged.

On September 30, 2024, the Company announced a fully subscribed non-brokered private placement financing for gross proceeds of up to \$2,000,000 through the issuance of up to of 20,000,000 common shares in the capital of the Company at a price of \$0.10 per Common Share. Gross proceeds raised from this placement will be used for exploration and development of the Kandiolé Project and for working capital and general corporate purposes.

### **MINERAL PROPERTIES**

### Kandiole Project - Mali

The Kandiole Project is comprised of nine contiguous gold prospective permits, encompassing approximately 402 sq. kilometres located within the Kéniéba "Cercle", an administrative sub-area of the Kayes Region, approximately 400 km west of Bamako, the capital of Mali in West Africa.

A mining permit (permis d'exploitation) may be granted for 12 years and is renewable for further periods of ten years until the mineral reserves have been exhausted. A mining permit may be granted to the holder of an exploration permit or a prospecting licence. Holders of a mining permit are required to enter an agreement referred to as a "Convention d'Établissement" or "Mining Convention Agreement" with the Malian government prior to the commencement of exploration or mining activities and must begin work within three years. A non-dilutable 10% share is owned by the Malian government, which reserves the right to acquire an additional of up to 20%, for a total of 30% of state participation in the future. The new mining code of 2023 also introduces an obligation for operating companies to sell 5% of their shares to Malian investors.

	Area		
Permit	(sq kms)		Renewal date
Dabia South	35	Company held	February 3, 2025
Kandiole North (i)	57	Company held	March 1, 2024
Kandiole West	25	Company held	June 13, 2024
Mankouke West (ii)	16	Option exercised	March 25, 2024
Moussala North (iii)	32	Company held	April 6, 2023
Niala	75	Company held	May 23, 2024
Segando South	65	Company held	January 21, 2025
Bantanko East (iv)	55	Under option	March 2, 2024
Segondo West (v)	<u>42</u>	Option exercised	March 20, 2023
	402		

- (i) In November 2022, the Kandiole North and the Mankouke permits were merged with no change in the total area. The renewal of the permit is pending due to the recent implementation of a moratorium as Mali is in the process of introducing a new mining code (note 1).
- (ii) The Kandiole West permit was expired on March 25, 2024, and the renewal of the permit is pending due to the recent implementation of a moratorium as Mali is in the process of introducing a new mining code.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

- (iii) The Moussala North permit was expired on April 6, 2023, and the renewal of permit is pending due to the recent implementation of a moratorium as Mali is in the process of introducing a new mining code.
- (iv) The Bantanko East permit was expired on March 2, 2024, and the renewal of the permit is pending due to the recent implementation of a moratorium as Mali is in the process of introducing a new mining code.
- (v) The option to acquire Segondo West was exercised in February 2023, but the permit was expired on March 20, 2023. The transfer and renewal of permit is pending for the same reason stated above.

It is noted that these terms are regulated under the older mining code and are subject to some changes upon the implementation of the new mining code.

### **Dabia South Gold Property**

On July 2, 2020, the Company purchased Komet Mali SARL, which holds the Dabia South permit.

A certain individual has made statements claiming rights to its Kabaya permit, which is held by Komet Mali SARL. Legal claims have been lodged and the Company considers that these statements are frivolous in nature and is taking steps to protect its interests in the permit.

### **Option Agreements - Exercised**

During fiscal 2021, the Company completed its option agreement obligations to acquire the Kandiole North, Kandiole West, Mankouke, Mankouke West, Moussala, Niala and Segando South permits, of which six of these seven permits have been transferred to the Company with the transfer of the Mankouke West permit pending. During fiscal 2023, the Company completed its option agreement obligations to acquire the Segondo West permit while the transfer of permit is pending.

### • Kandiole North - permit transferred

In November 2022, Kandiole North (40 sq. kms.) and Mankouke (17 sq. kms.) were merged into one permit with a total area of 57 sq. kms, resulting in Kandiole North becoming the surviving permit.

### Kandiole North

The Company acquired Kandiole North pursuant to an option agreement (dated June 4, 2018, with an effective date of November 3, 2017) with Touba Mining Junior SARL ("Touba"). Touba retained a 5% net profit interest ("NPI") and a 2% net smelter return royalty ("NSR") on all ore mined from the property. The Company has the right to purchase one-half of the NSR (equivalent to a 1% NSR) for \$1,000,000. Touba assigned its option rights under its agreement with Ouani-Or SARL to the Company.

### **Mankouke**

The Company acquired Mankouke pursuant to an option agreement (dated June 22, 2018) with Minex SARL ("Minex"). Minex retained a 3% NSR on all ore mined from the property. The Company has the right to purchase two-thirds of the NSR (equivalent to a 2% NSR) for US\$1,000,000.

### • Kandiole West – permit transferred

The Company acquired Kandiole West pursuant to an option agreement (dated June 4, 2018, with an effective date of November 3, 2017) with Touba. Touba retained a 5% NPI and a 2% NSR on all ore mined from the property. The Company has the right to purchase one-half of the NSR (equivalent to a 1% NSR) for \$1,000,000. Touba assigned its option rights under its agreement with Kara Mining SARL to the Company.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Mankouke West – transfer of permit is pending

The Company acquired Mankouke West pursuant to an option agreement (dated March 22, 2021) with Touba. Touba retained a 1% NSR on all ore mined from the property. The Company has the right to purchase the entire NSR for CDN \$1 million.

### • Moussala North and Segando South – permits transferred

The Company acquired Moussala North and Segando South pursuant to option agreements (each dated March 31, 2018) with K.L. Mining and K.A Gold Mining (collectively, the "Optionor"). The Optionor retained a 2% NSR on all ore mined from the property. The Company has the right to purchase one-half of the NSR (equivalent to a 1% NSR) for US\$1,200,000.

### Niala Option Agreement – permit transferred

The Company acquired Niala pursuant to an option agreement (dated April 27, 2018) with SOLF SARL ('SOLF"). SOLF retained a 2% NSR on all ore mined from the property. The Company has the right to purchase one-half of the NSR (equivalent to a 1% NSR) for \$500,000.

### Segondo West Option Agreement - Effective, February 5, 2018

During fiscal 2023, the Company completed its option agreement obligations to acquire the Segondo West permit. The transfer of the permit is pending. To exercise the option the Company has:

- (a) paid SO.FI.SI Mining SARL ("SO.FI.SI") an aggregate of 65,000,000 CFA francs (CDN\$144,171), as follows:
  - 10,000,000 FCFA (CDN \$23,410) on signing (paid);
  - 20,000,000 FCFA (CDN \$43,985) by February 5, 2022 (paid); and,
  - 35.000.000 FCFA (CDN \$76.776) by February 5, 2023 (paid).
- (b) incurred an aggregate of 160,000,000 CFA Francs (approximately CDN \$354,000) in exploration expenditures over the option period, as follows:
  - 50,000,000 FCFA by February 5, 2022 (completed); and,
  - 110,000,000 FCFA by February 5, 2023 (completed).

SO.FI.SI retains a 2% NSR on all ore mined from the property. The Company has the right to purchase one-half of the NSR (equivalent to a 1% NSR) for 450,000,000 CFA francs (approximately CDN \$996,000).

### **Option Agreement - Exercise pending**

Subject to the Company completing its option agreement obligations, the Company has the right to acquire a 100%-interest in the privately held Bantanko East option agreement, having an effective date of April 7, 2021, as further described below.

To exercise the option the Company shall:

- (a) pay Harmattan Consulting SARL ("Harmattan"), an aggregate of 115,000,000 CFA francs (approximately CDN \$254,000), as follows:
  - 20,000,000 FCFA (CDN \$45,622) on signing (paid);
  - 27,500,000 FCFA (CDN \$57,184) by April 7, 2022 (paid);
  - 30,000,000 FCFA (CDN \$66,315) by April 7, 2023 (paid on May 11,2023); and
  - 37,500,000 FCFA (approximately CDN \$85,000), upon the submission of the documentation to transfer the permit to the Company.
- (b) issue to Harmattan an aggregate of 115,000,000 CFA Francs (approximately CDN \$255,000) in common shares of the Company based on the closing market price preceding the share issuance date, as follows:

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

- 20,000,000 FCFA (CDN \$46,273) of shares on signing (90,731) shares issued);
- 27,500,000 FCFA (CDN \$56,898) of shares by April 7, 2022 (167,347 shares issued);
- 30,000,000 FCFA CDN \$67,248) of shares by April 7, 2023 (353,937 shares issued);
- 37,500,000 FCFA (approximately CDN \$85,000) of shares upon the submission of the documentation to transfer of the permit to the Company (approximately 1,214,000 shares).
- (c) incur an aggregate of 191,000,000 CFA francs (approximately CDN \$427,900) in exploration expenditures over the option period, as follows:
  - 44,000,000 FCFA by April 7, 2022 (completed); and,
  - 147,000,000 FCFA by April 7, 2023 (completed).

Note: Future commitments are based on July 31, 2024: exchange rates of 439 FCFA: \$1 for Canadian denominated amounts; and a closing share price of CDN \$0.07.

In conjunction with the property being placed into production, the Company shall incorporate an operating company and issue to Harmattan, within 30 days of the date of commencement of production, US \$1,000,000 in common shares of the operating company.

If a bankable feasibility study is prepared by the Company and the study reveals proven gold reserves equivalent to more than 1,000,000 oz, the Company shall provide: (i) Harmattan with the results of the study; and, (ii) issue to Harmattan, within thirty (30) days of receipt of such study, US\$1,000,000 in common shares of the Company.

Harmattan retains a two percent (2%) NSR on all ore mined from the property. The Company has the right to purchase one-half of the NSR (equivalent to a 1% NSR) for US \$1,000,000.

### SALE OF NET SMELTER RETURN ROYALTY

On December 2, 2022, the Company entered into a royalty financing agreement (the "Royalty Agreement") with Osisko Gold Royalties Ltd. ("Osisko"), whereby Osisko paid the Company \$5 million to acquire an initial 1.0% net smelter royalty ("NSR") in the properties that comprise the Company's Kandiole Project. In addition, Osisko retains the option to acquire an additional 1% NSR (the "Additional Royalty") in the Kandiole Project properties, at any time, by paying another \$5 million. The Company has the right to compel Osisko to acquire the Additional Royalty upon receipt of an exploitation licence issued by the Malian government in accordance with its mining codes or laws. The Company is currently applying for the exploitation licence which it expects in the near term.

Osisko retains a right of first offer ("ROFO") and a right of first refusal ("ROFR") pertaining to the sale of future royalties on current Kandiole Project properties and on properties that are subsequently acquired that are contiguous or complementary. As well, Osisko holds a ROFO and ROFR on the sale of streaming interests and on the Company's buyback rights on pre-existing royalties attached to the Kandiole Project properties. To secure its obligations under the Royalty Agreement, the Company pledged its shareholdings in its subsidiaries, Roscan Gold Mali SARL and Komet Mali SARL. The Company incurred advisory fees of \$120,000.

### NI 43-101 compliant Mineral Resources

The Technical Report dated June 30, 2022, with an effective date of March 31, 2022, titled "Technical Report on the Kandiole Project, Mali", has been prepared for the Company by David J.R. Reading, M.Sc., FSEG, FIOM3, Ivor W.O. Jones, M.Sc., P.Geo., FAusIMM and Ian R. Ward, B.Sc. (Hons), P.Eng. The Technical Report is available on the Company's SEDAR profile at www.sedar.com.

The Company's initial, pit-constrained, interim NI 43-101 compliant Mineral Resources reported at a gold price of only US\$1,500 per oz, 27.4 million tonnes grading 1.2 g/t Au totalling 1,020,000 ounces of gold in the Indicated

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

Category and 5.2 million tonnes grading 1.2 g/t Au totalling 198,000 ounces of gold in the Inferred category at its Kandiole project in Mali.

Resource calculation sensitivity at a 0.5g/t Au cut-off and US\$1,500 per ounce gold price reports 20 million tonnes grading 1.5 g/t Au totalling 923,000 ounces of gold in the Indicated Category and 3.8 million tonnes grading 1.4 g/t Au totalling 180,000 ounces in the Inferred category. Roscan's maiden pit constrained Mineral Resource includes gold mineralization from six mineral deposits: Mankouke South, Mankouke Central, Kandiole 1, Kandiole 2 and 4, Kabaya and Moussala. The discovery areas of Disse, Walia and Mankouke West were not included in the maiden resource due to lack of sufficient drilling to date but will be areas of upside for future exploration.

The cut-off date for data used in the resource estimate was March 25, 2022. Since March 25, 2022, Roscan has continued its drilling campaign to infill and extend the saprolite resource area and to follow up on the deeper mineralization at the Mankouke South and Kandiole targets. Drilling results have encountered plunging zones of mineralization that remain open.

Preliminary pit shells at Mankouke South indicate a low strip-ratio resource that is mostly oxide, with a robust starter pit of between 5.3 million tonnes at 2.2 g/t (386,000 ounces at 0.75 g.t cut-off) and 4.5 million tonnes at 2.6 g/t (377,000 ounces at 1.0 g.t cut-off)

The Mineral Resource classification resulted in Indicated Resources of 27.4Mt at 1.2g/t Au for 1,018koz, and Inferred resource of 5.2Mt at 1.2g/t Au for 199koz. A detailed summary of the deposit by target areas is presented in Table 1 below.

Table I: Detailed summary of the deposit by target areas

	rable 1. Became		eral Reso			Sensitivity		
		(0.3/0.42 g/t Au cut-off)         Tonnes       Gold Gold Gold Content (In Situ)       Grade Content Gold Content (In Mt         mt       g/t       Koz       mt         15.2       1.3       657       11.         0.9       1.7       47.5       0.7         2.8       0.9       79.7       1.8		(0.5	(0.5 g/t Au cut-off)			
Mineral		Tonnes	Gold	Gold	Tonnes	Gold	Gold	
Resource	Target Area	(In Situ)	Grade	Content	(In Situ)	Grade	Content	
Category		mt	g/t	Koz	mt	g/t	koz	
	Mankouke South	15.2	1.3	657	11.9	1.6	613	
	Mankouke Central	0.9	1.7	47.5	0.7	2.0	45.I	
Indicated	Kandiole	2.8	0.9	79.7	1.8	1.2	67.2	
	Kabaya	8.5	0.9	234	5.6	1.1	197	
	Total Indicated	27.4	1.2	1,018	20.0	1.5	923	
	Mankouke South	2.8	1.4	124	2.2	1.6	116	
	Mankouke Central	0.1	0.8	1.4	0.0	1.2	1.0	
	Kandiole	0.7	1.1	23.1	0.4	1.5	20.2	
Inferred	Kabaya	1.2	0.8	32.7	8.0	1.0	28.0	
merred	Kandiole North 2 and 4	0.3	0.9	8.7	0.2	1.1	7.6	
	Moussala	0.2	1.4	8.5	0.2	1.2	8.0	
	Total Inferred	5.2	1.2	199	3.8	1.4	181	

- 1. The effective date of the Mineral Resource Estimate is 31 March 2022.
- 2. A marginal COG of 0.30 g/t Au for all material is applied for oxide mineralization, and 0.42 g/t for fresh.
- 3. Mineral Resources, which are not Mineral Reserves, do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, marketing, or other relevant issues. The Mineral Resources in this Technical Report were estimated using CIM (2014) Standards on Mineral Resources and Reserves, Definitions and Guidelines.
- 4. A test to determine whether there is a Reasonable Expectation of Economic Extraction of Mineral Resources was completed using a pit optimisation based on a gold price of US\$1500/oz.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

- 5. The quantity and grade of reported Inferred Resources in this estimation are uncertain in nature and there has been insufficient exploration to define this Inferred Resource as an Indicated or Measured Mineral Resource. It is uncertain if further exploration will result in upgrading the Inferred Resource to an Indicated or Measured Mineral Resource category.
- 6. Contained metal and tonnes figures in totals may differ due to rounding.

The grade-tonnage model used as the resource model was prepared using ordinary kriging. Full details of the model is available in the NI 43-101 technical report currently filed on SEDAR.

During the technical work to define the mineral resource, each of the resource models was tested to check for a Reasonable Expectation of Economic Extraction (REEE). As part of the REEE, the model was tested at various gold prices as shown in Table 2 below.

Table 2: Pit Optimization Results

	US\$1500 /oz	US\$1800 /oz	US\$1900 /oz	US\$2000 /oz
Tonnes (mt)	38.2	42.3	47.2	50.1
Grade (g/t Au)	1.04	0.94	0.92	0.89
Metal (mOz)	1.28	1.37	1.40	1.43
Strip Ratio	2.70:1	2.52:1	2.45:1	2.44:1

- 1. These results are pit evaluation results and differ to the mineral resource.
- 2. The cut-off grade varies according to the area being tested and is defined by the strip ratio and applied mining costs. The effective cut-off grade also varies by gold price and state of weathering.
- 3. These results also include mineralisation as dilution which is below the cut-off grade for the mineral resource but is above the marginal cut-off grade.

### **EXPLORATION OVERVIEW - KANDIOLE PROJECT 2018 - 2024**

The reader should note that a detailed summary of the exploration activities since inception in 2018 to present is well documented in previous MD&A's, press releases and other reports and can be viewed on the Company's website at <a href="https://www.roscan.ca">www.roscan.ca</a> or on SEDAR at <a href="https://www.sedar.com">www.sedar.com</a>

### **Summary**

During F2018, the Company completed the acquisition of six contiguous permits for a total area of 253 square kilometers and commenced exploration on this land package.

On July 2, 2020, the Company acquired Komet Mali (Dabia South Gold Property, which has the Kabaya deposit – 35 sq. kilometers) through its wholly owned subsidiary Roscan Mali and on February 5, 2021, entered into option agreements for the Segondo West permit (42 sq. kilometers), March 22, 2021, the Mankouke West permit (16 sq. kilometers) and on April 7, 2021, the Bantanko East permit (55 sq. kilometers) for a total land package of 401.8 sq. kilometers.

The initial exploration approach for the Kandiole project consisted of reconnaissance prospecting, intensive termite mound sampling of both structural zones and areas identified as prospective, identification of gold anomalous areas from termite sampling results and Air Core (AC) drilling consisting of long lines of 50 metre angled heel to toe holes over gold anomalous zones. Significant gold intersections (discoveries) outlined by AC drilling were followed up with both Reverse Circulation (RC) and Diamond Drilling (DD) and subsequent grid drilling to outline resources. This exploration approach identified several discoveries including Mankouke, Kandiole and Moussala North.

To date, 8,415 AC and 1,111 auger holes have been drilled for a total of 345,940meters. A total of 634 RC and DD holes were drilled for a total of 100,099 meters.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

Roscan's initial compilation of technical information of the Kandiole Project identified several areas of immediate interest and also the major Siribaya corridor structure associated with exciting new discoveries such as B2Gold's Seko and Komet's Kabaya.

## <u>Drilling has been successful at several of the permits particularly at Mankouke South where impressive results include.</u>

- 5.94 g/t gold over 14 metres (including 26.7 g/t gold over 2 metres)
- 8.68 g/t gold over 14 metres (including 41.5 g/t gold over 2 metres)
- 8.47 g/t gold over 18 metres (including 29.0 g/t gold over 4 metres)
- 4.98 g/t gold over 8 metres (including 16.6 g/t gold over 2 metres)
- 8.63 g/t gold over 10 metres (including 11.48 g/t gold over 7 metres)
- 6.53 g/t gold over 5 metres (including 10.09 g/t gold over 3 metres)
- 5.56 g/t gold over 3 metres (including 7.14 g/t gold over 2 metres)
- 3.45 g/t gold over 10 metres (including 6.76 g/t gold over 3 metres)

  Note: True widths of all drill holes reported in the MD&A cannot be determined from the current information available.

In addition, the strong gold values intersected in AC drilling at the southern end of the Mankouke permit indicates that the entire seven-kilometre-long trend of the Siribaya structure on the Mankouke Permit, is a high priority exploration target.

The Mankouke gold mineralization trend is hosted in breccia zones, which are interbedded with deeply weathered saprolitic metasediments. This drilling indicates that the gold discovery initially reported (see news release of January 24, 2019) has "roots" and is not supergene.

Drill hole DDMan-20-34 intersected one the highest gram per meter thus far of 5.14 gpt over 65m and drill hole DDMan-20-54, intersected 6.15 gpt over 46.5m from 118.5m depth at Southern Mankouke. These drill holes when coupled with previously high-grade drill holes shows the persistent high-grade nature of the deposit.

### **Discoveries and Gold Prospects at Kandiole include:**

Mankouke South (MS1, MS2, MS3) Mankouke Central Mankouke West Kandiole North (KN1, KN2, KN3) Kabaya Walia/Moussala North Disse/West Moussala North Niala East

### Refer to Figure I below

### **Mankouke**

During F2021, 1036 AC holes (22,209m) were drilled at Mankouke West, 27 AC holes at Mankouke South (2,022 m) 6 AC holes (400m) at Mankouke Center and 15 RC (1,867 m) and 9 DD holes (2,290m) have been drilled from the beginning of May 2021 until the end of June 2021 at Mankouke South and West permits.

From January 2021 until the end of July 2021, 1,224 AC holes (32,638m), 41 RC holes (4,649 m) and 33 DD holes (8,509 m) have been drilled at the Mankouke -Mankouke West permits.

### QI 2022

During the quarter ended January 31, 2022, 22 RC and 22 DD holes were drilled (3,176m of RC and 2,210m of DD) in Mankouke South to develop additional resources.

This additional drilling outlined gold mineralization continuity in the Main Zone Intercept (MSI) towards the fresh rock at 300m vertical depth and gold mineralization in the MS3 zone, 300m NW of MSI and a possible connecting between MSI and MS3.

### Q2 2022

During the quarter ended April 30, 2022, 8 RC holes (1,250 m) were drilled in Mankouke South to demonstrate the link between the MS1 main mineralization and the MS3 satellite. There are some gold intercepts at the end of the holes displaying a connection. The next drilling program will be a few DD to reach the zone deeper.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

Q3 2022

During Q3, 15 RC (1,973 m) were drilled in the North extension of MS3, and 2 DD (499m), one DD in the link between MS1 and MS3, and the other hole was started in the South of MS1.

### Q4 2022

During Q4, the database was updated, and the results interpreted to design the next exploration program. Geological and gold envelope wireframe were adjusted with the last drilling results.

### Q1 2023

During Q1, F2023, the Mankouke permit was consolidated with the Kandiole North permit to form one permit called Kandiole North.

The data was reviewed to design a drilling program to add to the current resource footprint but also to explore zones in the vicinity but outside the resources area.

4 RC exploration holes (480m) were drilled at the East of the main resources MSI, and 3 RC holes (490m) were drilled in the Mankouke West permit, 2 of 3 in the MS3 gold mineralization extension and one on the gold saprolite target and As-Sb pathfinder footprint and confirmed by several scissor air core holes lines (Mankouke West new discovery).

### Q2 2023

During Q2, F2023, the Mankouke South prospect was visited by a geologist from Wardell Armstrong in order for them to complete the scoping study. At the same time, the environmental and social impact study was ongoing.

6 RC holes (991m) were drilled in the East of the main Mankouke Resource MS1, under a local miner's gold pit along an interpreted structural lineament.

7 RC holes (1050m) were drilled in the new Mankouke West gold saprolite target.

### Q3 2023

During Q3, following the Q2 audit, a drilling program was designed to extend the gold mineralization under the I,500\$ pit shell taking account of the structural interpretation done by Kim Hein and the deep potential from other deposits in the area like Fekola-Loulo-Sadiola demonstrating the current Mankouke mineralization is only the upper part of the deep structural system.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

12 RC holes (1,959m) were drilled in Mankouke West to confirm and extend the gold mineralization discovered from the previous RC program.

45 auger holes (379 m) were drilled to infill the AC lines previously drilled.

### Q4 2023

During Q4, the results and interpretation were included in the database. Geological and gold envelope wireframes were adjusted with the last drilling results. A deep core drilling program was proposed to follow the gold occurrence along the mineralized structure.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### QI 2024

During QI, Roscan was focused on data compilation including drilling – geochemistry results, multielement pathfinder, airborne and ground geophysics, remote sensing data to design a drilling program on Mankouke South mainly to demonstrate the upside resources under the I,500\$ pit shell but also program to demonstrate the concept of the major structural occurrence extension.

Another drilling program is designed not only to extend the Mankouke West gold mineralization but also to test the lineament further to the North of the permit, on the geochemistry Gold-Arsenic-Antimony overlapping the conductive and magnetic high signature from the airborne geophysics survey.

### Q2 2024

During Q2, Roscan reviewed the resources estimations within the context of higher current gold prices versus \$1500 used for estimation. A new drilling program has been designed to test for upside on new wireframes to provide additional upside to the current resources and further delineate the conceptual targets outside the resource footprint.

### Q3 2024

During Q3, Roscan revised its internal economic model taking into account a higher gold price scenario to support the Kandiole mining permit application.

### **Dabia South - Walia and Kabaya**

During Q3, F2021, 13 RC holes totalling 1,537 metres were drilled at its Kabaya target confirming the mineralization extension to the North and South of the main mineralization. In addition, 26 AC holes totalling 818 meters were drilled in the NE of the Dabia South permit vertically until reaching the saprolite to do a saprolite geochemistry survey. From the beginning of F2021 until the end of July 2021, 21 AC holes (48,245 m), 40 RC holes (5,291 m) and 14 DD holes (3,821 m) were drilled.

### QI 2022

During January 2022, 13 RC drill holes totalling 1,452 meters were completed at Kabaya. This program was designed to consolidate and increase the Kabaya resource with step-out drilling to extend the gold mineralization.

### Q2 2022

The Q2, F2022 drilling program was comprised of 60% step-out holes to test for new gold zones along the North South strike from KBI to cover the underexplored zone between KBI and KB3. The remaining 40% of the Reverse Circulation drill holes were focused on an infill drilling program in KBI and KB2.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Q3 2022

35 RC holes were drilled totalizing 5,147m in the resource zone, under the US\$1,500 pit shell to expand the resources at KB1, KB2 but also in KB3 which display high grade intercepts at depth, in the fresh rock.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Q4 2022

During Q4, the database was updated, and the results interpreted to design the next exploration program. Geological and gold envelope wireframe were adjusted with the last drilling results.

QI 2023

During Q1, F2023, a few RC holes were drilled in Kabaya KB2 and more in KB3 to add to the resources.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Q2 2023

During Q2, F2023, the Kabaya prospect was visited by a geologist from Wardell Armstrong in order for them to complete the scoping study. At the same time, the environmental and social impact study was ongoing. 9 RC holes (1,470m) were drilled mainly step-out holes and exploration targets.

### Q3 2023

During the Q3 period, 12 RC holes (1,832m) were drilled mainly on the exploration targets around the Kabaya resource area.

### Q4 2023

During Q4, the results and interpretation were included in the database. Geological and gold envelope wireframes were adjusted with the last drilling results. The significant results from targets around the known resources were interpreted to design the next drilling program.

### QI 2024

During QI, from I7 RC drill holes which tested a few targets outside the resource zones revealed the anomalous gold results. Reprocessing and interpretation of the ground gravity survey with the airborne magnetic and VTEM airborne support allow the company to design a follow-up drilling program.

### Q2 2024

During Q2, Roscan reviewed the resources estimations within the context of higher current gold prices versus \$1500 used for estimation. A new drilling program has been designed to test for upside on new wireframes to provide additional upside to the current resources and further delineate the conceptual targets outside the resource footprint within the ground geophysics gravity signature.

### Q3 2024

During Q3, Roscan is still updating the file from the economical point of view taking account of higher gold price to achieve the Kandiole Mining permit application.

### **Kandiole North**

239 AC holes (14,993 m), 14 RC holes (1,680 m) and 4 DD holes (1,090 m) were drilled from the beginning of January 2021 until the end of April 2021.

2000 m strike length of the mineralization in the Kandiole is open at depth. Further drilling will be undertaken on this discovery.

### QI 2022

During the quarter ended January 31, 2022, 24 RC holes were drilled (3,136 m) in Kandiole North KN1 to confirm the resources estimation from previous AC drilling that had taking place. In addition of the main NNE-SSE main strike, the additional ENE-WSW extension direction was followed up.

The Q1- 2022 drilling campaign demonstrated the gold mineralization extension vertically and laterally. The Reverse Circulation drilling program has bolstered the continuity, consistency, and the geometry knowledge of the gold bearing directions.

### Q2 2022

During Q2 - 2022, 7 RC holes were drilled for a total 1,012 m and 7 DD (1,142m) to extend mineralization from saprolite resource toward the fresh rock and link the deep mineralization previously intercepted in the DD hole.

### Q3 2022

During Q3, 31 RC 4,482m, 6 DD 1,651 were drilled mainly in the resource area, under the US\$1,500 pit shell to include more ounces in the resources estimation but also to develop laterally the resource in the strike length.

### Q4 2022

During Q4 -2022, the database was updated, and the results interpreted to design the next exploration program. Geological and gold envelope wireframes were adjusted with the last drilling results.

### QI 2023

During Q1 2023, the Mankouke permit was consolidated with the Kandiole North permit to form one permit called Kandiole North.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Q2 2023

During Q2, 2023, the Kandiole North KN1 prospect was visited by a geologist from Wardell Armstrong in order for them to complete the scoping study. Meanwhile, the environmental and social impact study was ongoing.

### Q3 2023

During Q3, following the Q2 audit, a drilling program was designed but not drilled to extend the gold mineralization under the 1,500\$ pit shell taking account of the structural interpretation done by Kim Hein and the deep potential from other deposits in the area like Fekola-Loulo-Sadiola demonstrating the current Kandiole KNI mineralization is only the upper part of the deep structural system.

### Q4 2023

During Q4, the database under MxDeposit software was completed with all detailed drilling information.

### Q2 2024

During Q2, Roscan reviewed the resources estimations within the context of higher current gold prices versus \$1500 used for estimation. A new drilling program has been designed to test for upside on new wireframes to provide additional upside to the current resources and further delineate the conceptual targets outside the resource footprint.

### Q3 2024

During Q3, Roscan revised its internal economic model taking into account a higher gold price scenario to support the Kandiole mining permit application.

### **Disse**

### QI 2022

### Q2 2022

During the quarter ended April 30, 2022, I I additional RC holes (1,376m) were drilled showing that the high-grade gold extension continues to grow with several high-grade intervals in the fresh rock along several distinct mineralized lodes. From the results of the western RC fence line, gold mineralization has the potential to continue further toward the West.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Q4 2022

During Q4, F2022, the database was updated, and the results interpreted to design the next exploration program. Geological and gold envelope wireframes were adjusted with the last drilling results.

### Moussala North

10 RC (1,109m) and 3 DD holes (819m) were drilled at Moussala North from May 2021 to the end of June 2021 and from the beginning of 2021 until the end of July 2021, 333 AC holes (15,401 m), 15 RC holes (1,689m), 3 DD holes (819m) have been drilled.

The RC holes drilled show gold mineralization close to surface towards the South. This target is open at depth.

No additional drilling took place during the quarter ended April 30, 2022. The relogging and new geological interpretation were completed, based on the Kim Hein report (June 2022) recommendations. During the Q1 2023, the new geological interpretation was documented by a new relogging session focuses on specific topics such as hornfels occurrences, structural lineation, bedding, differentiation between different brecciated facies, etc.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Q2 2023

During Q2, 2023, the Moussala MOUI prospect was visited by a geologist from Wardell Armstrong in order for them to complete the scoping study. At the same time, the environmental and social impact study was ongoing.

### Q3 2023

6 RC step-out holes (763m) were drilled but returned without gold extension close to the surface.

#### O4 2023

During Q4, the results and interpretation were included in the database. Geological and gold envelope wireframes were adjusted with the last drilling results and interpretations.

### QI 2024

During QI, some structural measurements focused mainly on the lineation orientations and fold axes collected were used to improve the gold mineralization interpretation and litho-structural features to generate the next drilling program.

### Q2 2024

During Q2, Roscan reviewed the resources estimations within the context of higher current gold prices versus \$1500 used for estimation. A new drilling program has been designed to test for upside on new wireframes to provide additional upside to the current resources under the dolerite dyke.

### **Regional exploration**

### Segondo West-Bantanko East

During the quarter 1,964 termite mounds were collected, 838 infill termite mounds were sampled and analyzed by LeachWell. The outcrops and geomorphological mapping have supported the result interpretation.

From the previous termite geochemistry, Gold, Arsenic and Antimony anomalous geochemistry were followed-up with a saprolite geochemistry by auger drilling. 105 saprolite samples from 105 auger drill holes were collected from Segondo West permit and 215 samples/hole from Bantanko East, totalling 2,358m and analyzed for Gold by 2kg Leachwell analytical method. This survey confirmed in some places the termite geochemistry trends.

In February 2023, 615 m in 6 RC holes were drilled in Segondo West permit targeting the termite mounds higher geochemistry gold anomalies and Arsenic-Antimony pathfinder but didn't return with significant gold results.

### **Segondo South**

968 termite mounds were collected and will be sent to the lab for Leachwell analysis. The survey covers the unexplored Fekola granite.

### Niala

219 termite mounds were collected and sent to the lab for Leachwell analysis. This survey completed the previous Termite geochemistry grid and returned with several gold trends to follow-up.

In March and April 2023, 2345m in 20 RC holes targeting mineralized roots from previous Air Core holes, termite mounds and saprolite geochemistry anomalies. On the exploration level (large space between holes), some holes must be followed up displaying low grade intercepts, mainly to the North-East of the permit.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

280 auger holes (1,290m) were drilled in Niala permit, mainly to infill the gold anomalous zones from the previous Air Core survey confirming the gold trend in the center and in the window between two dolerite sill hills providing some over Ig/t gold anomalous points.

### **Dabia South**

219 termite mounds were collected in the NE part of the permit, where the lateritic crust is extensive constituting a geochemistry mask preventing the reliable geochemistry signature from the in situ saprolite. These samples were sent to the lab for Leachwell analysis and Inductively Coupled Plasma (ICP).

In January 2023, 1004m in 7 RC holes were drilled targeting mineralized roots from previous Air Core holes, termite mounds gold anomalies and structural/geochemistry weathering interpretation. The Walia vertical mineralization was confirmed under the shallow gold from Air Core but the single line following the termite mound and structural interpretation didn't provide any significant results.

466 auger holes (3,394m) were drilled mainly in the NE of the permit where there is a large extension of the lateritic crust and in the vicinity of the Kabaya resource where there were some exploration gaps and displayed some gold anomalous to follow up by deeper drilling (RC).

### **Leachwell and ICP Testing**

The termite mound samples collected in Kandiole North and West permits were analyzed using the Leachwell method were analysed by ICP for multielement and the samples missing were collected again to do ICP analysis (3,852 samples).

### **SUMMARY OF QUARTERLY RESULTS**

		Royalty Income	Corporate and administration	Exploration and evaluation	Share-based payments	Net income/ (loss)	Net income/ (loss) per share

For F2024, fluctuations in quarterly results were influenced mainly by: (1) higher Corporate and administration costs in Q2 attributable to the filing and listing costs in Q2 associated with the private placement of \$1M convertible promissory notes on March 11, 2024, and the expense of a full-year software license fee not being reported in F2023: (2) decreased exploration and evaluation expenditures during F2024 related to the Kandiole Project, which included less expenditure on consulting and contracting and field office: 3) increased share-based payments during F2024, which is attributable to the grant of stock options in Q3 to the directors and consultants of the Company and restricted stock units and performance stock units granted in Q3 to the directors and CEO of the Company.

For F2023, fluctuations in quarterly results were influenced mainly by: (1) sale of net smelter return royalty in Q1: (2) increased exploration and evaluation expenditures related to the Kandiole Project in Q2, which included the costs associated with the exercising of option agreements to acquire permits: (3) share-based payments attributable

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

to the grant of stock options and restricted stock units in Q2 to the Company's directors, officers and consultants respectively: (4) decreased in Exploration and evaluation cost in Q4 due to the pause of major drilling and field exploration activities in Mail as the government was in the process of introducing a new mining code and the permitting process has been temporarily interrupted due to this moratorium. The Company is waiting for the release of the implementing decree, which will lift the sanctions and enable the resumption of the permitting process.

For F2022, fluctuations in quarterly results were influenced mainly by: (1) an overall decrease in corporate and administration expenses: (2) decreased exploration and evaluation expenditures during F2022 related to the Kandiole Project, which was mainly due to focussing on finalizing the NI 43-101 technical report as discussed above. During Q2 there was an increase in spending because several permits were transferred to the Company's wholly owned Mali subsidiary: (3) increased share-based payments during F2022, which is attributable to the grant of stock options in Q2 and Q3 to the Chairman of the Company and restricted stock units granted in Q2 granted the Chief Executive Officer ("CEO") of the Company.

### **RESULTS OF OPERATIONS**

The net loss for the third quarter of F2024 was \$939,366 versus a net loss of \$2,385,185 for the comparative quarter of F2023, representing a decrease of \$1,445,819. The net loss for the nine-month period of F2024 was \$2,319,661 compared to a net loss of \$3,900,414 for the comparative quarter of F2023, representing a decrease of \$1,580,753. The decrease in the net loss was mainly attributable to significant less Exploration and evaluation costs (F2024 - \$860,437 vs F2023 - \$6,823,508) due to the temporary pause of permitting process in Mali, and a drilling program specifically designed based on previous assay results to increase the resource as the Company largely scaled back its drilling and field exploration activities at the Kandiole Project.

1. Corporate and administrative expenditures for the quarter ended July 31, 2024, were \$253,311 compared to \$308,763 for the same period in F2023. For the nine months ended July 31, 2024, the Company incurred \$845,857 compared to \$1,072,768 for the same period in F2023.

	Three months ended July 3 I			Nine months ended July 3 I			
	2024		2023		2024		2023
Consulting \$	42,400	\$	39,620	\$	129,425	\$	207,692
Corporate development and promotion	31,450		83,467		147,137		222,163
Listing and share transfer	12,328		10,810		55,331		51,571
Management fees	128,369		145,147		383,369		445,284
Office and general	27,274		16,799		71,405		56,813
Premises	300		5,530		900		21,820
Professional fees	11,190		7,390		58,290		67,425
\$	253,311	\$	308,763	\$	845,857	\$	1,072,768

a. Consulting costs for three months ended July 31, 2024, were not materially different to F2023. Consulting costs for nine months ended July 31, 2024, were lower than those for the same periods in F2023. The decrease was primarily attributable to restructuring within the organization.

b. Corporate development and promotion costs for the three months and nine months ended July 31, 2024, were lower than those for the same period in F2023 due to a decrease in corporate and investor marketing activities.

c. The listing and share transfer costs for the three and nine months ended July 31, 2024, were not materially different to those for the same period in F2023.

- d. Office and general costs for three and nine months ended July 31, 2024, were higher than those for the same period in F2023. The increase was driven mainly by the full-year license fee of a data site software not being expensed in F2023, but partially offset by lower insurance premium and a reduced need for information technology services.
- e. Premise costs for three and nine months ended July 31, 2024, were lower than for the same period in F2023 because of the termination of rent payment for the office in Beford, Nova Scotia on July 1, 2023.
- f. Professional fees for three months ended July 31, 2024, were not materially different to F2023. Professional fees for nine months ended July 31, 2024, were lower than those for the same period in F2023 as a result of a change in the timing of advisory fees for the Company's legal and accounting audit activities.
- 2. Kandiole Project exploration and evaluation expenditures for the three and nine months ended July 31, 2024, were (F2024 \$238,088 vs F2023 \$2,001,796) and (F2024 \$860,437 vs F2023 \$6,823,509) respectively. As discussed above, the reduced drilling and exploration expenditures resulted from: a) a focussed drilling program at the Kandiole Project designed based on previous results to increase the resource, and b) significantly reduced operational activities as the Mali government was in the process of introducing a new mining code and the permitting process has been temporarily paused. The Company's accounting policy is to expense all exploration expenditures.

	Three months ended			Nine months ended			
				July 3 I			July 3 I
		2024		2023	2024		2023
Acquisition costs	\$	-	\$	67,221	\$ -	\$	67,221

	\$	238,088	\$	2,001,796	\$ 860,437	\$	6,823,509

<sup>3.</sup> Share-based payments for the three and nine months ended July 31, 2024, were (F2024 - \$359,365 vs F2023 - \$92,144) and (F2024 - \$529,794 vs F2023 - \$881,278) respectively, which represent the fair value attributable to the grant of stock options and restricted stock units.

<sup>4.</sup> Foreign exchange loss/ (gains) for the three and nine months ended July 31, 2024, were (F2024 - \$28,604 vs F2023 - \$(17,519)) and (F2024 - \$10,115 - vs F2023 - \$2,859). These loss/ (gains) resulted primarily from fluctuations in the United States dollar and the Euro and the timing of payment to various vendors.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

5. Interest on notes payables for the three and nine months ended July 31,2024, were (F2024 - \$59,998 vs F2023 - \$nil) and (F2024 - \$73,546 vs F2023 - \$nil) respectively, both higher those for the same periods in F2023. This represents the 12% per annum interest component contained in both the promissory notes for gross proceeds of \$1,000,000 from the date of issuance on March 11, 2024, and the issuance of a US\$677,000 principal amount interest bearing secured promissory note on May 3, 2024.

### LIQUIDITY AND CAPITAL RESOURCES

### Cash flows

Operating activity cash flows for the current three and nine months period of F2024 were influenced mainly by corporate and administrative as well as the Kandiole Project exploration expenditures, which were also responsible for the changes in prepaid expenses, accounts payable and accrued liabilities.

Financing activity cash flows for the three and nine months ended F2024 reflects: 1) gross proceeds of \$1,000,000 through the issuance of convertible promissory notes from private placement, which constituted a related party transaction as insiders of the Company subscribed an aggregate of \$400,000 principal amount of Notes pursuant to the Offering. This \$400,000 principal amount of Notes consisted of cash loans due to related parties provided by a director and a company controlled by a Company director/officer in the three and nine months ended July 31, 2024: 2) the debt settlement for an aggregate of US\$1,050,000 owing to a certain creditor and related to drilling and other services provided to the Company including the issuance of 5,000,000 common shares of the Company at a deemed price of CAD\$0.08 per common share and the issuance of a US\$677,000 principal amount interest bearing secured promissory note.

### Working capital

As of July 31, 2024, the Company had cash of \$62,514 and working capital of \$3,796,702 deficiency. Sales tax receivables represent amounts to be refunded by the Canadian government. Prepaid expenses include amounts advanced to fund future corporate and Kandiole Project activities.

On December 2, 2022, the Company raised additional capital of \$5 million from the sale of a 1.0% NSR. Upon receipt of an exploitation licence issued by the Malian government the Company has the right to compel Osisko Royalties to acquire an additional 1% NSR by paying an additional \$5 million as discussed in the sale of net smelter return royalty.

On March 11, 2024, the Company has closed the initial tranche of a non-brokered private placement through the issuance of an aggregate of \$1,000,000 principal amount secured subordinate promissory notes for gross proceeds of \$1,000,000. Gross proceeds of the Offering will be used for general corporate and working capital purposes. The Notes bear interest at 12% per annum from the date of issuance and shall mature on September 11, 2024 (the "Maturity Date"). The Notes are convertible, in whole or in part, into common shares in the capital of the Company at a conversion price equal to CAD\$0.11 per Common Share. The Note holders shall receive accrued and unpaid interest on the Note, paid in cash, up to, but excluding, the earlier of the date of conversion and the Maturity Date.

On September 6, 2024, the Company announced that, further to its press release of March 11, 2024, it has extended the maturity date of its outstanding secured subordinate promissory notes in the aggregate of \$1,000,000. The Company has extended the maturity date from September 11, 2024, to September 11, 2025. All other terms and conditions of the Notes shall remain unchanged.

On September 30, 2024, the Company announced a fully subscribed non-brokered private placement financing for gross proceeds of up to \$2,000,000 through the issuance of up to of 20,000,000 common shares in the capital of the Company at a price of \$0.10 per Common Share. Gross proceeds raised from this placement will be used for exploration and development of the Kandiolé Project and for working capital and general corporate purposes.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

The Company will require additional capital to fund its activities for the next twelve months. Further, should Roscan acquire additional properties then the Company will require additional capital to fund the acquisition and/or associated exploration activities on the new properties.

### **SHARE CAPITAL**

As of the date of this MD&A, Roscan has the following securities outstanding:

Security	Number
Common shares	398,143,038
Options	27,044,130
Restricted stock units	5,685,000
Performance stock units	2,000,000

On February 24, 2023, 3,000,000 RSU's expired.

On April 26, 2023, the Company granted 2,465,113 stock options to the directors of the Company. These options vested immediately and were issued with an exercise price of \$0.20 and a five-year term.

On April 26, 2023, the Company granted 1,100,000 and 950,000 stock options to the officers and consultants of the Company, respectively. These options vested immediately and were issued with an exercise price of \$0.20 and a five-year term.

On April 26, 2023, the Company granted 3,225,000 RSUs to two directors of the company. These RSUs expire on April 26, 2026, and vest equally over a three-year period on the anniversary dates.

On June 28, 2024, the Company granted 2,362,000 stock options to the directors of the Company. These options vested immediately and were issued with an exercise price of \$0.10 and a five-year term.

On June 28, 2024, the Company granted 1,050,000 and 1,200,000 stock options to the officers and consultants of the Company, respectively. These options vested immediately and were issued with an exercise price of \$0.10 and a five-year term.

On June 28, 2024, the Company granted 2,460,000 RSUs to three directors of the company. These RSUs vest equally (or graded) over a two-year period on the anniversary dates.

On June 28, 2024, the Company granted 2,000,000 PSUs to a director of the company. The restriction period in respect of these PSUs terminate on December 31, 2028.

### **RELATED PARTY TRANSACTIONS AND BALANCES**

Management fees for the services of Company officers of \$127,500 (F2023 - \$144,167) for the three-month period and \$382,500 (F2023 - \$444,303) for the nine-month period ended July 31, 2024, were accrued or paid as follows:

- President and Chief Executive Officer, Mr. Nana Sangmuah \$87,500 (F2023 \$87,500) for the current three-month period and \$262,500 (F2023 262,500) for the nine months period, paid to Ekrakow Consulting. The agreement for Mr. Sangmuah's services was effective, December 19, 2019.
- Chief Financial Officer, Mr. Jun (Danny) Cao \$40,000 (F2023- \$56,6677) for the current three-month period and \$120,000 (F2023 \$61,387) for the nine months period, paid to Jun (Danny) Cao. The agreement for Mr. Jun (Danny) Cao's services was effective, March 15, 2023.

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

Rent was paid or became payable to a company controlled by a Company officer/director for the Company's office in Bedford, Nova Scotia. Beginning May 1, 2022, the Company began renting these office premises on a month-to month basis and paid \$nil for the current three months period (F2023 – \$5,230) and \$nil (F2023-\$20,920) for the nine-month period as the Company ceased to rent the office in Beford on July 1, 2023.

Share-based compensation (non-cash) of \$279,385 (F2023 - \$92,144) for the current three-month period and \$449,814 (F2023 - \$734,955) for the nine months period represent for the fair value of stock options and RSUs granted to directors/officers only and exclude stock options granted to the Company's consultants.

The Company received cash loans provided by a director and a company controlled by a Company director/officer of \$170,000 (F2023- \$nil) for current three-month period and \$585,035 (F2023 - \$nil) for the nine months period ended July 31, 2024. On March 11, 2024, \$400,000 of the cash loans was subscribed for an aggregate of \$400,000 principal amount of convertible promissory notes. Loans due to related parties balance of \$185,035 (F2023 - \$nil) and the Company repaid \$nil (October 31, 2023 - \$nil) of the cash loans for the nine-month period ended July 31, 2024. These loans are non-interest bearing, unsecured and due on demand.

The Company has in place termination and change of control clause agreement with two of the Company's officers and a consultant to the Company, whereby the officers and consultant are entitled to a cumulative amount of \$1,104,446 (October 31, 2023 - \$1,098,190) in the event they are terminated without cause or in the event there is a change of control.

### **COMMITMENTS AND CONTINGENCIES**

For additional information on commitment and contingencies, please refer to Note 14 in Roscan's unaudited condensed interim consolidated financial statements for the nine-month period ended July 31, 2024.

### **SUBSEQUENT EVENTS**

On September 6, 2024, the Company announced that, further to its press release of March 11, 2024, it has extended the maturity date of its outstanding secured subordinate promissory notes in the aggregate of \$1,000,000. The Company has extended the maturity date from September 11, 2024, to September 11, 2025. All other terms and conditions of the Notes shall remain unchanged.

On September 16, 2024, the Company announced that Mr. Nana Sangmuah has been appointed as the Executive Chairman of the Board of Directors, effective September 16, 2024. Mr. Sangmuah will succeed Sir Samuel Jonah, who is stepping down from his role as Non-Executive Chairman for personal reasons. Additionally, the announced the appointment of Mr. Rahul Paul to its Board of Directors, effective September 16, 2024.

On September 30, 2024, the Company announced a fully subscribed non-brokered private placement financing for gross proceeds of up to \$2,000,000 through the issuance of up to of 20,000,000 common shares in the capital of the Company at a price of \$0.10 per Common Share. Gross proceeds raised from this placement will be used for exploration and development of the Kandiolé Project and for working capital and general corporate purposes.

### **NEW ACCOUNTING POLICIES**

For information on current and future changes in accounting policies and disclosures, please refer to Note 5 in Roscan's unaudited condensed interim consolidated financial statements for the nine-month period ended July 31, 2024.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

#### FINANCIAL INSTRUMENTS

Disclosure on Roscan's financial instruments and related risks may be found in Note 16 of Roscan's unaudited condensed interim consolidated financial statements for the nine-month period ended July 31, 2024.

Roscan will need to raise additional cash to mitigate its exposure to liquidity risk. Liquidity risk management requires maintaining sufficient cash, liquid investments, or credit facilities to meet the Company's operating expenditures and commitments, as they come due. The Company will need to deploy its capital to fund acquisitions, option agreement and property payments, corporate overheads, and project exploration activities. In addition, Kandiole Project expenditures are denominated in the West African CFA franc, Euros, and the United States dollar, giving rise to market risk from changes in foreign exchange rates.

The Company does not have a risk management committee or written risk management policies. The Company has not entered into any specialized financial agreements to minimize its credit or foreign currency risks. There are no off-balance sheet arrangements.

### **CAUTIONARY STATEMENTS**

This MD&A may contain forward-looking statements relating to, but not limited to, Roscan's assumptions, estimates, expectations and statements that describe Roscan's future plans, intentions, beliefs, objectives or goals, that are subject to a number of known and unknown risks, uncertainties and other factors that may cause actual results to differ materially from those expressed or anticipated by such forward-looking statements. Statements that address activities, events or developments that the Company expects or anticipates will or may occur in the future are forward-looking statements or forward-looking information, including, but not limited to, statements preceded by, followed by or that include words such as "may", "will", "would", "could", "should", "believes", "estimates", "projects", "potential", "expects", "plans", "intends", "anticipates", "targeted", "continues", "forecasts", "designed", "goal", or the negative of those words or other similar or comparable words. Examples of such forward-looking statements, without limiting the generality of the foregoing, include:

- potential to earn our interest in mineral properties;
- ability to complete permit or property acquisitions/transactions and conduct exploration work;
- evaluation of the potential impact of future accounting changes;
- capital requirements and ability to obtain funding; and,
- ability to continue as a going concern.

Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements and forward-looking information. Such factors include, but are not limited to:

- condition of underlying commodity markets and prices;
- · ability to raise necessary capital;
- fluctuations in foreign exchange and stock market volatility;
- receipt or retention of necessary permits or approvals;
- suspension or delays in our operations due to diseases or viruses;
- access to properties and contests over title to properties;
- obtaining exploration, environmental and mining approvals;
- · quality of exploration results and mineralogy;
- · performance of our partners and their financial wherewithal;
- the speculative nature of exploration and development and investor sentiment;
- competition for, among other things, capital, acquisitions of resources and/or reserves, undeveloped lands and skilled personnel;
- changes in national and local governments, legislation, taxation, controls, regulations and political or economic developments in which the Company conducts or may conduct business;
- business opportunities that may be presented to, or pursued by, us;
- our ability to correctly value and successfully complete acquisitions;

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

• effectiveness of corporate and community relations.

Although Roscan believes that the assumptions, estimates and expectations reflected in our forward-looking statements are reasonable, results may vary, and we cannot guarantee future results, levels of activity, performance or achievements. Readers are cautioned not to place undue reliance on these forward-looking statements due to the inherent uncertainty. Roscan disclaims any intent or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or other such factors which affect this information, except as required by law.

### **RISKS AND UNCERTAINTIES**

Roscan is in the business of exploring for minerals and, if successful, ultimately mining them. The mining sector is by its nature, cyclical, competitive and risky. Many of these risks are beyond the Company's control. Investment in the mining sector in general and the exploration sector, in particular, involves a great deal of risk and uncertainty which may have an adverse effect on Roscan's business, results of operations, financial condition and/or the value of its securities. Roscan's common shares should be considered as a highly speculative investment. Current and potential investors should give special consideration to the risk factors involved.

### Acquisition risk

Roscan uses its best judgment in the acquisition of mineral properties or an alternative business venture and, in pursuit of such opportunities, the Company may fail to select appropriate acquisition candidates or negotiate acceptable agreements, including agreements to finance the acquisition and development of the mineral properties or business venture. The Company cannot provide assurance that it can complete all the acquisitions that it pursues, on favourable terms, or that any acquisition will ultimately benefit the Company. The Company has assembled a board of directors with strong experience in mergers and acquisitions.

### Artisanal miner risk

Roscan's Malian operations are subject to small-scale artisanal mining activity, from time to time. While the Company has been able to conduct its exploration activities at its Kandiole Project, there is a risk of conflict with the artisanal miners, which may prevent further development, and as a result, there can be no assurance that access to the properties will be granted in the future or that the Company will be successful in moving the artisanal miners, if need be.

### Competition risk

Roscan must compete with a number of other companies that possess greater financial and technical resources. Competition in the mining and business sectors could adversely affect the Company's ability to acquire mineral properties or projects.

### Conflicts of interest risk

Certain directors and officers of Roscan, in their personal capacities or as directors or officers of other companies, are engaged or have interests in mineral exploration and development activities outside of the Company. Accordingly, exploration opportunities or prospects of which they are involved with will not necessarily be made available to the Company.

### Counterparty risk

Counterparty risk is the risk that each party to a contract will not fulfill its contractual obligations. The entering into a transaction for a business opportunity exposes the Company to this risk. The Company is exposed to this risk through its Kandiole Project option agreements.

### Dependence on directors, management and third parties' risk

Roscan is very dependent upon the efforts and commitment of its directors, management, consultants, contractors, drilling contractors and Touba Mining SARL to the extent that if the services of these parties were not available, or

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

failed to perform its obligations at the Kandiole Project, a disruption in the Company's operations may occur, which may have an adverse effect on the Company's objectives and financial condition.

### **Environmental risk**

Exploration and development activities conducted on Roscan's mineral properties are subject to the environmental laws and regulations of the country in which the activities take place. Environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties, more stringent environmental assessments and a heightened degree of responsibility for companies and their officers, directors and employees.

Environmental laws and regulations may change at any time prior to the granting of necessary approvals. The support of local communities will be required to obtain necessary permits. Although the Company undertakes to comply with current environmental laws and regulations, there is no assurance that changes in environmental laws or regulations will not adversely affect the Company's operations.

### Exploration risk

There is no assurance that the activities of Roscan will be successful and result in economic deposits being discovered and in fact, most companies are unsuccessful due to the low probability of discovering an economic deposit. Once mineralization is discovered and resource and reserves identified, it may take several years until production is possible during which time the economics of a project may change. Substantial expenditures are required to establish reserves through drilling. Roscan's ability to establish a mining operation is subject to a host of variables, such as the physical, technical and economic attributes of a deposit, availability of capital, cyclical nature of commodity markets and government regulations.

Exploration activities involve risks which even a combination of experience, knowledge and prudence may not be able to overcome. Exploration activities are subject to hazards and risks which could result in injury or death, property damage, adverse environmental conditions, and legal liability. Fires, power disruptions and shortages and the inability to access land or obtain suitable or adequate equipment or labour are some of the hazards and risks involved in conducting an exploration program.

### Financing and liquidity risk

The Company's ability to continue as a going concern, retain its mineral properties, finance its exploration and development activities, and make acquisitions is highly dependent on its working capital and its ability obtain additional funds in the capital/equity markets. Roscan does not have production income or a regular source of cash flow to fund its operating activities. In addition, Roscan's financial success is dependent on the extent to which it can discover mineralization in economic quantities and the economic viability of developing its properties or projects.

Roscan will require additional capital to finance its overall objectives and there can be no assurance that the Company will be able to raise the capital required, thus jeopardizing the Company's ability to achieve its objectives, meet its obligations or continue as a going concern. Given the nature of the Company's operations, which consist of exploration, evaluation, development and acquisition of mineral properties or mining projects, the Company believes that the most meaningful financial information relates primarily to current liquidity and solvency. There can be no assurance that the Company's directors/officers will fund the Company's working capital needs.

Failure to obtain sufficient and timely financing may result in delaying or indefinitely postponing exploration or development activities. If the Company obtains debt financing, it may expose its operations to restrictive loan and lease covenants and undertakings. If the Company obtains equity financing, existing shareholders may suffer dilution.

#### Infrastructure risk

Exploration and development activities depend, to one degree or another, on adequate infrastructure. Reliable roads, bridges, power sources and water supply are important determinants, which affect capital and operating costs. The lack of availability of acceptable terms or the delay in the availability of any one or more of these items could prevent or delay exploration or development of the Company's projects. If adequate infrastructure is not available, there can

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

be no assurance that the exploration or development of the Company's projects will be commenced or completed on a timely basis, if at all.

### Malian operating risk

Roscan's operations are located in the western region of Mali, West Africa and are exposed to various levels of political, economic and other risks and uncertainties, among others. These risks and uncertainties vary from time to time and include, but are not limited to: government coups, labour disputes, nullification of governmental orders and permits, unstable political and economic environments, potential for bribery and corruption, high risk of inflation and interest rates, currency devaluation, sovereign risk, war (including in neighbouring states), military repression, civil disturbances, terrorist activity, arbitrary changes in laws or policies, delays in obtaining or the inability to obtain necessary governmental permits, opposition to mining from environmental or other non-governmental organizations, limitations on foreign ownership, difficulty obtaining key equipment and components for equipment and inadequate infrastructure. These risks may limit or disrupt operations and exploration activities, restrict the movement of funds, or result in the deprivation of contractual rights or the taking of property by nationalization or expropriation without fair compensation, all of which would have a material adverse effect on the Company's operations.

The Company's activities are subject to numerous local laws and regulations. Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities, who may require operations to cease or be curtailed, installation of additional equipment, or remedial actions.

Since the end of the legislative elections in April 2020, Mali has been confronted with a socio-political crisis marked by protests by a coalition group. Mediation efforts have been undertaken by the international community as well as a variety of national figures to promote negotiation and to find solutions to put an end to the crisis. In August 2020, the Malian military seized power, resulting in President Ibrahim Boubacar Keita announcing his resignation and the dissolution of the Government National Assembly. Mali is currently being governed by a transitional government.

The operations of Roscan have not been disrupted in any respect by terrorist activity or the military coup and Roscan continually monitors and assesses the situation and potential risks.

Political risk also includes the possibility of civil disturbances and political instability in neighbouring countries, as well as threats to the security of properties and workforce due to political unrest, civil wars, or terrorist attacks. Any such activity may disrupt our operations, limit our ability to hire and keep qualified personnel as well as restrict our access to capital.

#### Malian government risk

While the government of Mali has supported the development of its natural resources by foreign companies, there is no assurance that the government will not in the future adopt different policies or new interpretations respecting foreign ownership of mineral resources, rates of exchange, environmental protection, labour relations, and repatriation of income or return of capital. Any limitation on transfer of cash or other assets between Roscan and its subsidiaries could materially adversely affect its financial condition and results of operations.

Moreover, mining tax regimes in foreign jurisdictions are subject to differing interpretations and constant changes and may not include fiscal stability provisions. Roscan's interpretation of taxation law, including fiscal stability provisions, as applied to Roscan's transactions and activities may not coincide with that of the Malian tax authorities. As a result, taxes may increase and transactions may be challenged by Malian tax authorities and Roscan's Malian operations may be assessed, which could result in significant taxes, penalties and interest. Roscan may also encounter difficulties in obtaining reimbursement of refundable taxes from tax authorities.

#### Pandemic diseases and viruses risk

Roscan's operations may be exposed to the risk of pandemic diseases and viruses (such as COVID-19), which could have adverse economic and social impacts on global societies and in areas in which the Company operates. Such

## Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

pandemics could pose a threat to maintaining our operations as planned, due to shortages of workers and contractors, supply chain disruptions, insufficient healthcare, changes in how people socialize and interact, government or regulatory actions or inactions, declines in the price of our underlying commodities, as well as capital market volatility. There can be no assurance that our workers, partners, suppliers, consultants and contractors will not be impacted by such diseases or viruses. As a result, the Company may not be able to predict and effectively mitigate the impact from such diseases or viruses on its operations and these diseases and viruses could have a material adverse effect on our business, operating results, financial condition and share price. Roscan has been able to continue its Malian exploration activities successfully by implementing stringent protocols, with no reported cases of COVID-19.

### Permit and Property title risk

Roscan's current and anticipated future exploration and development activities on its properties, require permits from various governmental authorities. The costs and delays associated with obtaining necessary permits and complying with these permits and applicable laws and regulations could prevent, delay or restrict the Company from proceeding with certain exploration or development activities.

Although Roscan takes reasonable measures to ensure proper title in the properties in which it holds or is acquiring an interest, there may still be undetected title defects affecting such properties. Accordingly, the properties in which Roscan holds or is acquiring an interest may be subject to prior unregistered liens, agreements, transfers or claims, or unsatisfied work commitments, all of which could have a material adverse impact on Roscan's operations. In addition, the Company may be unable to access or operate its properties as permitted or to enforce its rights with respect to its properties. If a title defect exists, it is possible that the Company may lose all or part of its interest in the properties to which such defects relate.

There can be no assurance that the Company or the private entities holding the permits will be able to secure, obtain, renew or maintain all necessary licenses and permits or other tenures that may be required to explore and develop the properties. Further, there can be no assurance that governments having jurisdiction over the Company's mineral properties will not revoke or significantly alter such permits or other tenures or that such permits and tenures will not be challenged or impugned. Delays or a failure to obtain or renew such permits, or a failure to comply with the terms of any such permits that the Company has obtained or is earning an interest in, could have a material adverse impact on the Company.

### Price risk

The ability of Roscan to finance the acquisition, exploration and development of its mineral properties and the future profitability of the Company is strongly related to the price of gold; the market price of the Company's equities; and, commodity and investor sentiment. Gold and equity prices fluctuate on a daily basis and are affected by a number of factors beyond the Company's control. A decline in either the price of gold, the Company's issued equities or investor sentiment could have a negative impact on the Company's ability to raise additional capital. Management monitors the commodity and stock markets to determine the applicable financing strategy to be taken when needed.

### Share volatility and dilution risk

The securities markets are subject to a high level of price and volume volatility, and the securities of many mineral exploration companies can experience wide fluctuations in price, which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. The price of Roscan's common shares may also be significantly affected by short term changes in mineral prices or in the Company's financial condition or results of operations as reflected in its financial reporting.

In order to finance future operations and development efforts, the Company may raise funds through the issue of common shares or the issue of securities convertible into common shares. The Company cannot predict the size of future issues of common shares or the issue of securities convertible into common shares or the effect, if any, that future issues and sales of the Company's common shares will have on the market price of its common shares. Any transaction involving the issue of shares, or securities convertible into shares, could result in dilution, possibly substantial, to present and prospective holders of shares.

Management's Discussion & Analysis (for the three and nine month period ended July 31, 2024)

### Sufficiency of insurance risk

The business of Roscan is subject to a number of risks and hazards, including adverse environmental conditions, pollution, industrial accidents, labour disputes, unusual or unexpected geological conditions, ground or slope failures, cave-ins, changes in the political or regulatory environment and natural phenomena such as inclement weather conditions, floods, earthquakes and dust storms. Such occurrences could result in damage to mineral properties, personal injury or death, environmental damage to the Kandiole Project, delays in the exploration and development of the Kandiole Project, monetary losses and possible legal liability.

Although the Company maintains insurance to protect against certain risks in such amounts as the Company considers to be reasonable, the insurance may not cover all the potential risks associated with the operations of the Company and insurance coverage may not be available or may not be adequate to cover any resulting liability. It is not always possible to obtain insurance against all such risks and the Company may decide not to insure against certain risks because of high premiums or other reasons. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration and development is not generally available to the Company or to other companies in the mining industry on acceptable terms. Losses from these events may cause the Company to incur significant costs that could have a material adverse effect on the Company's business, results of operations, financial condition and/or the value of its securities or otherwise affect the Company's insurability and reputation in the market.

If the Company incurs losses not covered or not fully covered by the Company's insurance policies, such losses may have a material adverse effect on the Company's business, results of operations, financial condition and/or the value of its securities.
